

Supply and Commission FPT N67ENTX engine

This is first of an ongoing order for 6 x FPT N67ENTX industrial power-packs supplied by Mitchell Powersystems to BenchMark Wireline Products which have been installed into their Skid Mounted Winch Logging Units for an oil & gas industry application.

The FPT N67ENTX engine is a 6 cylinder in line diesel, producing: 175 kW (238 Hp) @ 2200 rpm - 1020 Nm @ 1500 rpm - TIER 3 / STAGE III A

We also made maintenance of the engines easier to monitor and manage for the end user by installing FPT's Remote Assistance data dongle for live monitoring of the engine and allow download of technical manuals.
